Introduction

Thermostatic expansion valves regulate the injection of refrigerant liquid into evaporators. Injection is controlled by the refrigerant superheat. Therefore the valves are especially suitable for

liquid injection in "dry" evaporators where the superheat at the evaporator outlet is proportional to the evaporator load.

Features

- **Large temperature range**
Equally applicable to freezing, refrigeration and air conditioning applications.
- **Interchangeable orifice assembly**
 - easier stocking
 - easy capacity matching
 - better service.
- **Rated capacities from 0.5 to 15.5 kW (0.15 to 4.5 TR) for R22.**
- **Can be supplied with MOP** (Max. Operating Pressure)
Protects the compressor motor against excessive evaporating pressure during normal operation.
- **Stainless steel bulb**
Fast and easy to install.
Good temperature transfer from pipe to bulb.
- **Valves for special temperature ranges can be supplied.**

Technical data

Max. temperature
Bulb, when valve is installed: 100°C
Bulb, element not mounted: 60°C

Min. temperature
T 2 → TE 2: -60°C

Max. test pressure
PT = 38 bar

Max. working pressure
PS/MWP = 34 bar

MOP-points

Refrigerant	Range N -40°C → +10°C	Range NM -40°C → -5°C	Range NL -40°C → -15°C	Range B -60°C → -25°C

	+15°C / +60°F	0°C / +32°F	-10°C / +15°F	-20°C / -4°F
R22	100 psig/6.9 bar	60 psig/4.0 bar	35 psig/3.5 bar	20 psig/1.5 bar
R407C	95 psig/6.6 bar			
R134a	55 psig/5.0 bar	30 psig/3.1 bar	15 psig/2.1 bar	
R404A/R507	120 psig/9.3 bar	75 psig/6.2 bar	50 psig/4.4 bar	30 psig/3.1 bar

Superheat

SS = static superheat
OS = opening superheat
SH = SS + OS = total superheat
 Q_{nom} = rated capacity
 Q_{max} = maximum capacity

Static superheat SS can be adjusted with setting spindle.

The standard superheat setting SS is 5 K for valves without MOP and 4 K for valves with MOP.
The opening superheat OS is 6 K from when opening begins to where the valve gives its rated capacity Q_{nom} .

Example
Static superheat SS = 5 K
Opening superheat OS = 6 K
Total superheat SH = 5 + 6 = 11 K

¹⁾ See the section "Flare connections".

²⁾ For R407C plants, please select valves from the dedicated R407C program

Flare connections

Connection for copper tubing with outside diameter		Reducer for copper tubing with outside diameter		Code no.
in.	mm	in.	mm	
$\frac{1}{4}$	6			011L1101
$\frac{3}{8}$	10			011L1135
$\frac{1}{2}$	12			011L1103
		$\frac{1}{4}$	6	011L1107

Example

A TE 2 thermostatic expansion valve consists of two elements + flare nuts if required:

- 1 thermostatic element
- 1 orifice assembly and flare nuts

When ordering one thermostatic expansion valve, TEX 2 with orifice 01, five code numbers are required:

- 1-off thermostatic element, **068Z3209**
- 1-off orifice assembly 01, **068-2010**
- 1-off $\frac{3}{8}$ in. flare nut, **011L1135**
- 1-off $\frac{1}{2}$ in. flare nut, **011L1103**
- 1-off $\frac{1}{4}$ in. flare nut, **011L1101**

³⁾ TE valves with inch outlet have 1/4 inch pressure equalization. TE valves with mm outlet have 6 mm pressure equalization.

⁴⁾ For R407C plants, please select valves from the dedicated R407C program

Solder adaptor

The adaptor is for use with thermostatic expansion valves T 2 and TE 2 with flare × solder connections. When the adaptor is fitted correctly it meets the sealing requirements of DIN 8964.

The adaptor offers the following advantages:

- The orifice assembly can be replaced.
- The filter can be cleaned or replaced.

When using the solder adaptor, a special orifice assembly is required. Please use the following tables to select both the appropriate adapter and orifice assembly.

Only in this way can the sealing requirements of DIN 8964 be fulfilled.

Solder adaptor for filter drier (FSA) may not be used in the T 2 inlet.

Correction
for subcooling Δt_{sub}

Note:
Insufficient subcooling can produce flash gas.

The evaporator capacities used must be corrected if subcooling deviates from 4 K.
The corrected capacity can be obtained by

Δt_{sub}	4 K	10 K	15 K	20 K	25 K	30 K	35 K	40 K	45 K	50 K
Correction factor	1.00	1.06	1.11	1.15	1.20	1.25	1.30	1.35	1.39	1.44

Example

Refrigerant = R22
Evaporator capacity $Q_e = 5$ kW
Subcooling = 10 K

dividing the required evaporator capacity by the correction factor below. Selections can then be made from the tables above.

Correction factor from table = 1.06
Corrected capacity = $5 : 1.06 = 4.72$ kW

Correction
for subcooling Δt_{sub}

Note:
Insufficient subcooling can produce flash gas.

The evaporator capacities used must be corrected if subcooling deviates from 4 K. The corrected capacity can be obtained by

dividing the required evaporator capacity by the correction factor below. Selections can then be made from the tables above.

Δt_{sub}	4 K	10 K	15 K	20 K	25 K	30 K	35 K	40 K	45 K	50 K
Correction factor	1.00	1.10	1.20	1.29	1.37	1.46	1.54	1.63	1.70	1.78

**Design
Function**

General

T 2 and TE 2 valves have an interchangeable orifice assembly.

For the same valve type and refrigerant, the associated orifice assembly is suitable for all versions of valve body and in all evaporating temperature ranges.

The charge in the thermostatic element depends on the evaporating temperature range.

The valves can be equipped with internal (T 2) or external (TE 2) pressure equalization.

External pressure equalization should always be used on systems with liquid distributors.

The double contact bulb gives fast and precise reaction to temperature changes in the evaporator. It also makes fitting the bulb quick and easy.

The valves are able to withstand the effects that normally occur with hot gas defrosting.

To ensure long operating life, the valve cone and seat are made of a special alloy with particularly good wear qualities.

1. Thermostatic element (diaphragm)
2. Interchangeable orifice assembly
3. Valve body
4. Superheat setting spindle (see instructions)

Identification

The thermostatic element is fitted with a laser engraving on top of the diaphragm. This engraving gives valve type (with code number), evaporating temperature range, MOP point, refrigerant, and max. working pressure, PS/MWP.

The code refers to the refrigerant for which the valve is designed:

X = R22/R407C¹⁾
Z = R407C
N = R134a
S = R404A/ R507

¹⁾ For R407C plants, please select valves from the dedicated R407C program

Orifice assembly for T 2 and TE 2

The orifice assembly is marked with the orifice size (e.g. 06) and week stamp + last number in the year (e.g. 174).
The orifice assembly number is also given on the lid of its plastic container.

Capillary tube label for T 2 and TE 2

The label gives the orifice size (04) and consists of the lid of the orifice assembly plastic container. It can easily be fastened around the expansion valve capillary tube to clearly identify the valve size.
